

## **BONE MILL AND TEMPLATE**

### **ABSTRACT**

Bone mills and templates for use in during bone resectioning is provided. The templates have a flat upper surface or an interior track, and the mill has an edge that rides on top of the upper surface or within the groove. The template thus guides the mill during bone resectioning, delimiting the area and depth of the bone that is removed. Additional bone mills with supports and frames that control the depth of milling are also provided.
